

# Routing of Mastering Chain Allowing Quick Comparison at Equal Volume Levels

## Notes:

- o Master FX 1 and Master FX 2 are grouped to create exclusive solo.
- o Commercial Compare and Volume Gating may use exclusive solo grouping instead of volume envelopes by turning off “read automation” on the buses and grouping the solo buttons on each bus.
- o To temporarily remove the Volume Ramp bus from the chain turn off “read automation” on Volume Ramp and set Volume Ramp bus output volume to 0 dB.
- o To export the pre-master or master file, choose the export source as “buses” and then select either the Pre-Master, Master FX1, or Master FX 2 bus.
- o To temporarily remove the Volume Gating bus and Commercial Compare from the chain just mute Commercial Compare, turn off “read automation” on Volume Gating, and set Volume Gating bus output volume to 0 dB.
